Abstract

The car maintenance center is the service center operating business about the car maintenance and car condition checking. Therefore, the development of the car maintenance center to be modernized is important for the business operation by improving the management system of the car maintenance center. The program has been designed by using the Program Adobe Dreamweaver CS6, writing the Program of PHP Language (Personal Home Page Tools), version 5.2.6, and using the MySQL program, version 5.0.51b to keep the database. The program could manage the membership data, service use data, search for the repairing record and issuance of the repairing report for more data security. As consequence, the user has convenience to use the service, which enhances the efficiency of the business operation and could solve the data storage problems.
