Abstract

Circulation systems, information technology center strand. Siam University has made borrowing equipment. Problems in the storage device. Lending and night. The devices have disrupted the orderly operation. Sophisticated device information. In addition, the Center for Information Technology, the need for open channels through the Internet. So the user do Three reservation in advance through hazard. And more convenient to the user. So users do not waste time waiting for the authorities to check the device. Development of information circulation in the equipment. Developed using PHP that activates the engine of the system. And the database storage using My Sqn Lt (My SQL) to manage and solve problems more effectively.
