Abstract

At present, JIL Computer is a company which work on system maintenance, systems installment, computer equipment. And various electronic devices. A process which get the job informed by telephone only. Customers must contact authorities via telephone to inform about customer's data, condition of broken equipment on papers. This paper documents may get damaged. Making it difficult to search for documents. Causing errors in the process. Time consuming to take action that making the operation delay. Therefore, the authors have concept to develop an online system repair which is a web application. For added convenience to our customers. And more convenient for administrators to manage customer information and employees. Reducing the time and procedures. It can also collect data. Searching for job descriptions, customer's data, to facilitate the work even more.
