Abstract

“ Trade Fair “ or Event Organizer in the form of the product to sell or displayed at the event. The event will hold in store, department, or adolescents according to place is more popular. Making for us to search for more information and interest in the trade fair. Therefore, we have found a company which provides information about the Trade fair, and then we just have to collect information from the multiple tenant shop, and we have found that there are problems, Communication, space reservation hassle, the list name dropped, the area doesn't match the reservations. All of which are problems from the management information. Therefore, we thus have the idea that will use the web application to solve data management and steps to reserve space within a job.

Therefore, we have thought about the concept that will bring Web applications which is the web online to solve management information. So, select the PHP language which is a language that is suitable for development of Web applications. We choose the programs for study and development is Adobe Deamweaver CS6 and use MySQL is a database for storage and Appserv server is for developing web applications. With a focus on design, easy to understand and reasonable with the most users. The development of web application is successful as the target by the system can be made to the scope of the specified are to store data, to space booking and to work through a Web browser and test users are satisfied with the system.
