Abstract

The purpose of developing material management systems is to increase accuracy of data and to reduce the working time of the organization to operate smoothly. The group has studied information about the management system, material and computer equipment from the websites and manuals, and then began learning the management of the services. Researcher brought the service charges, divided the group, and applied the information from the service charges management that we've received. Then we checked with the information on the system that matched with each other. By studying information and learning to manage the service charges, it is found that managing charges by used the list for management was inefficient and delayed in operating. Therefore, to enable the management system to function efficiently and to create a fast, efficient operation of the Organization, Researcher has developed the management system on computer equipment for the organization for replacing the system of aforementioned.

Keywords: service charges, material management system, material
