

Abstract

The cooperative education at Pathumwan Princess Hotel, The learner worked from May 30 to September 2,2016. The learner was assigned to work in the banquet department, which found that, The box which collected menu tag behind the banquet department was rather old and ruin, because of much use and made by strengthless paper, it also contained to many menu tags. Those brought the old box collapses and didn't have enough area to carry all of the tags.

Hence the learner solved this problem. By consulting with staffs about finding the solutions and figured out the idea of inventing the new box in order to strengthen the use in banquet department's usage, those boxes could collect more menu tags neatly. So the learner chose the hard paper to produce boxes to be used for the banquet department as those boxes are stretcher than others as well as a suitable color and to extend the storage space. Lastly, these reduced staff's duty to tidy up those tags.
